

Photo frame 1.4 — “Storage”. Process flowchart

Per the 1.4 storage specification, 2026-09-07. One storage for photos and videos; place — TV memory or a flash drive; three outcomes for a video: into storage, stream, skip.

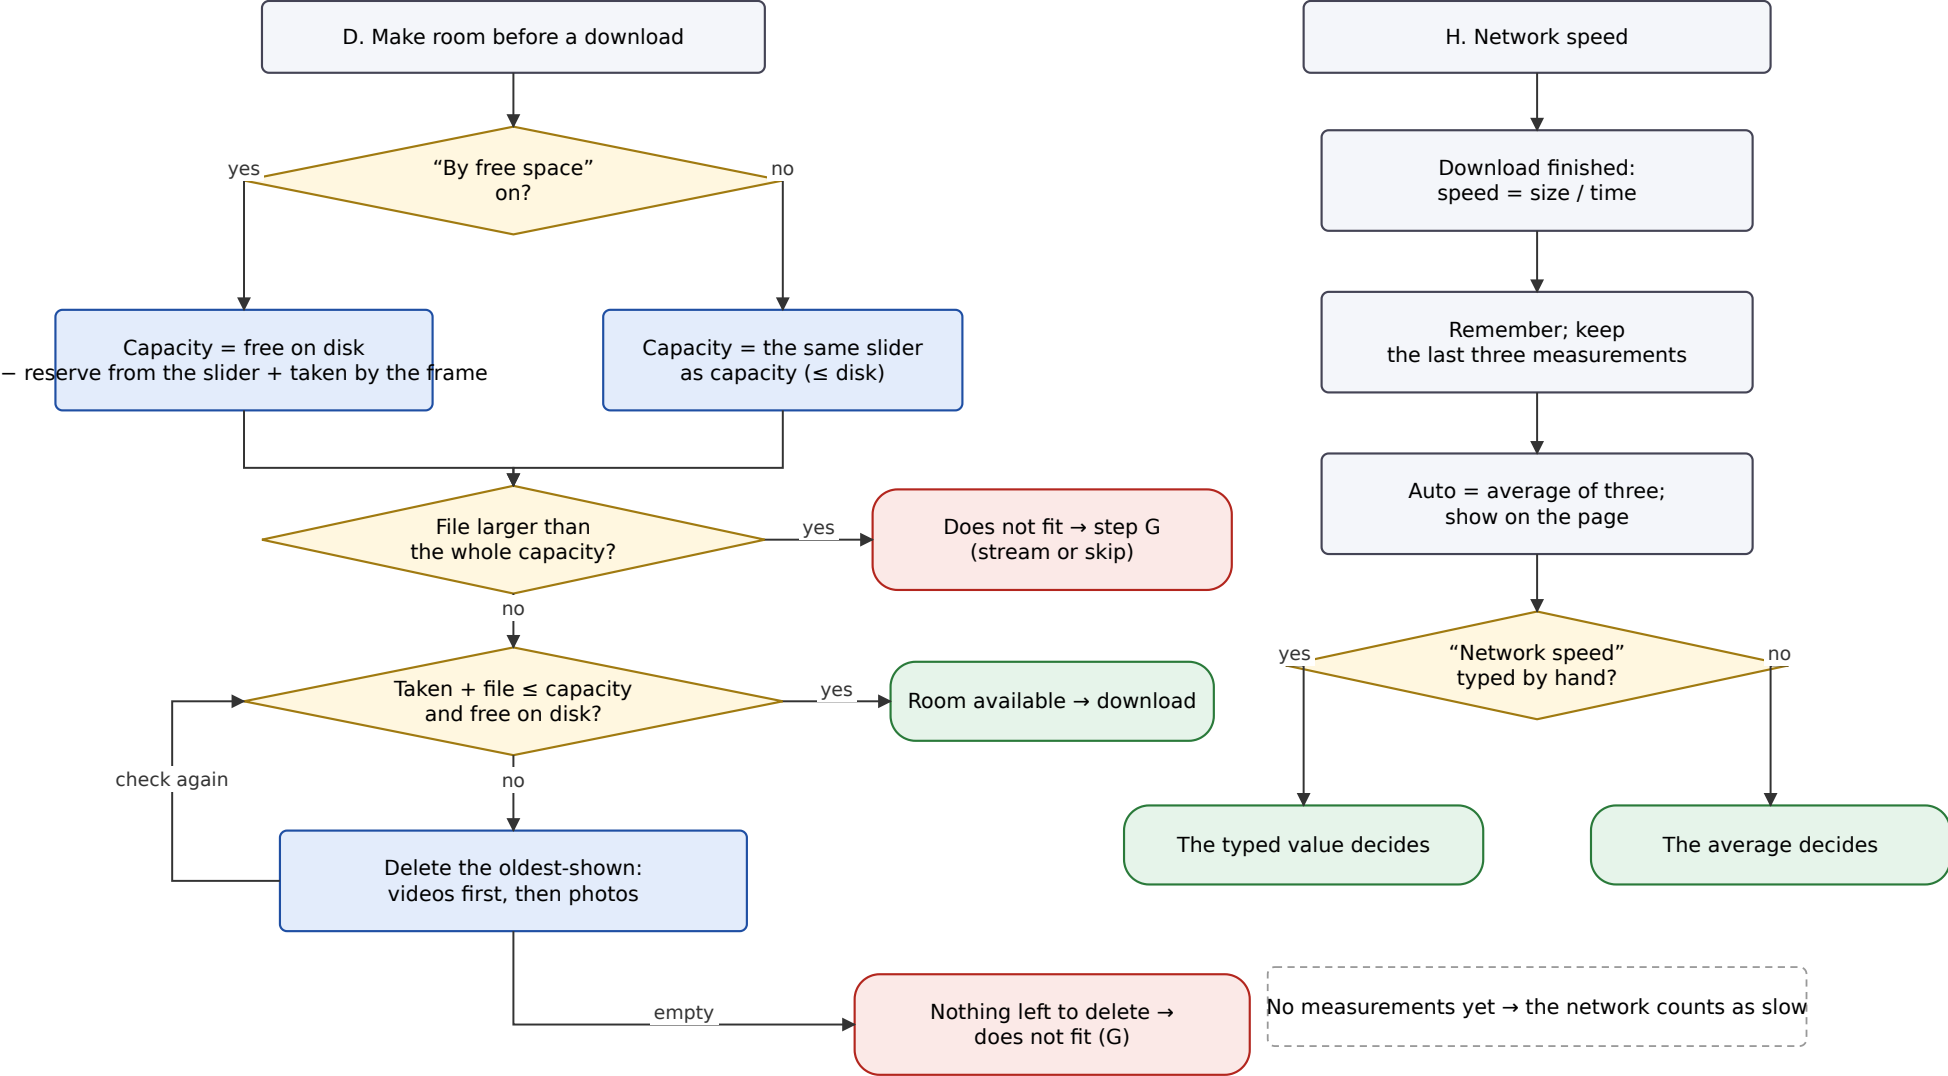

- action
- decision
- storage
- show
- skip

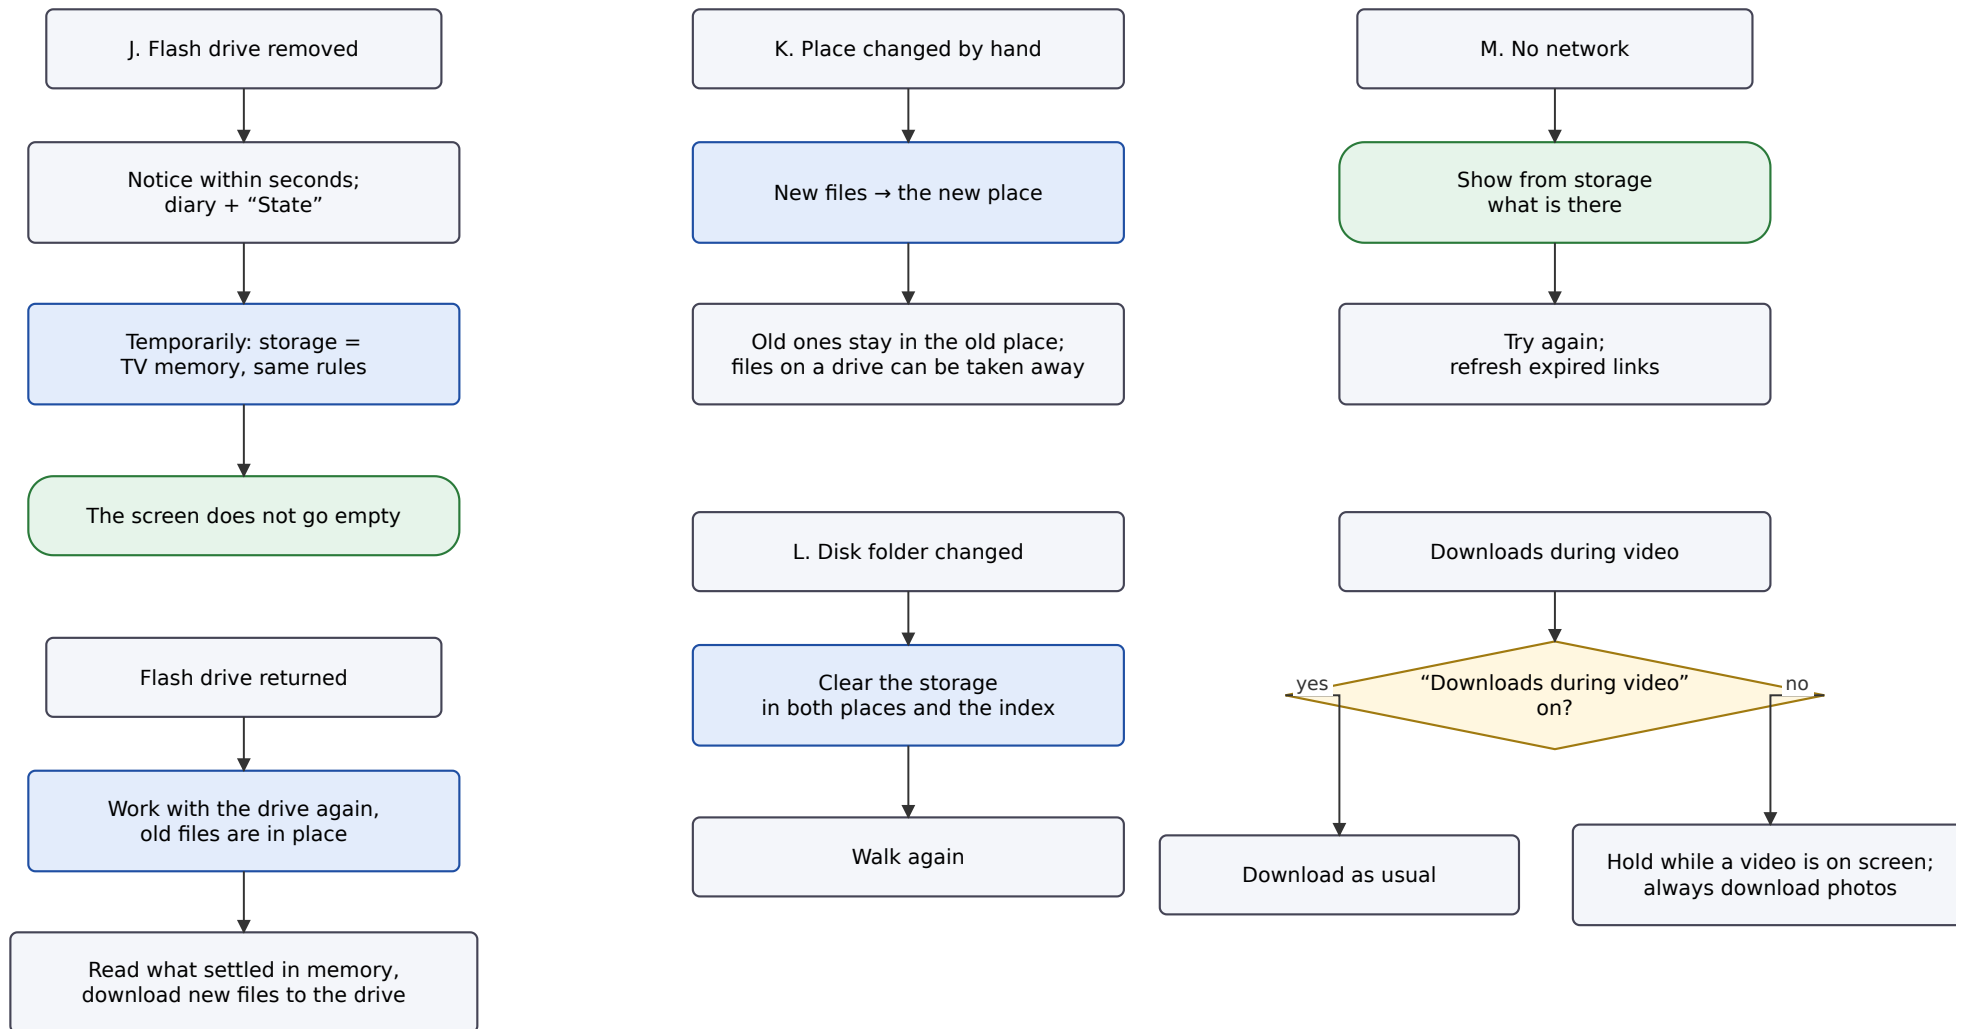

Sheet 2. The path of a photo and a video from the prefetch window to the screen (steps C-G)

Sheet 3. Step D “Make room” and step H “Network speed”

Sheet 4. Events: flash drive, place, folder, network (steps J-M)

Sheet 5. Settings after the simplification

Section	Setting	Default	What it does
Media files	Video	on	Turns video off. The index still knows about videos.
	Sound in video, Portraits in pairs, Skip small ones, New more often, Clock, Capture date	as before	Unchanged.
	Video no longer than	2 min	After that the frame moves to the next slide. Zero — to the end.
	File no heavier than	2 GB	A heavier file is skipped: not downloaded, not streamed, not shown. Zero — no limit.
	Don't keep lighter than	photo 0, video 0	One row, two sliders “photo” and “video”. A lighter photo is downloaded anew for every show, a lighter video is streamed. Zero — keep all.
	Downloads during video	on	Off stops downloads while a video is on screen.
	The “What to show” and “Video” sections merged.		
	Wording unified: “video” everywhere.		
Storage	Storage place	TV memory	TV memory or an inserted flash drive. A drive is checked with a test write.
	Storage capacity	memory: 2 GB; drive: by free space, reserve 1 GB	One row: a slider from 0 to the disk size and a “By free space” toggle. Off — the slider sets the capacity. On — the same slider becomes the “Reserve”: how much free space to leave alone, the rest is taken.
	Network speed	auto	The average of the last three downloads; can be typed in, then the typed value decides.
	Prefetch ahead	10	How many files ahead the queue is prepared. A long video download does not stop the queue.
	Check Yandex Disk	1.5 h	Unchanged.
Removed	“Photo cache”, “Video to cache up to”, “Video buffer”, “Network speed to Disk” in its old meaning, “Video no heavier than” (becomes “File no heavier than”), “Space reserve” (becomes the reserve in the “Storage capacity” row).
